SRM University-AP, Andhra Pradesh is committed to providing an accessible and inclusive digital experience for people with disabilities.

This Accessibility Statement describes the accessibility approach for the Qiskit Fall Fest 2026 website and digital event information made available through the website, including event information, schedules, registration-related information, workshops, speakers, community activities, announcements, resources, and related event materials.

The statement is intended to explain the accessibility standards used, the accessibility features provided, how accessibility is evaluated, known limitations, and how users can report an accessibility barrier.

§ 2 WEBSITE IN SCOPE

This Accessibility Statement applies to:

WEBSITE	Qiskit Fall Fest 2026
URL	https://qffsrmap.com
ORGANIZATION	SRM University-AP, Andhra Pradesh

The scope includes website pages, navigation, forms, interactive components, multimedia, downloadable documents, event information, and other digital content controlled by the organizers.

Third-party websites, external registration systems, embedded services, social-media platforms, external repositories, and other resources that are not controlled by SRM University-AP may have their own accessibility policies and technical limitations.

§ 3 ACCESSIBILITY COMMITMENT

We are committed to designing, developing, publishing, and maintaining the Qiskit Fall Fest 2026 website so that people with disabilities can perceive, understand, navigate, interact with, and contribute to the website.

Accessibility is considered throughout the website lifecycle, including content creation, interface design, development, testing, publication, maintenance, and updates.

We aim to provide equivalent access to essential information and functionality through accessible digital alternatives where a particular component or external service cannot itself be made accessible.

§ 4 ACCESSIBILITY STANDARDS

The website is developed with the following accessibility standards and guidance as its technical baseline:

- ▶ **WCAG 2.2 Level AA** — Web Content Accessibility Guidelines.
- ▶ **IS 17802 (Part 1):2021** — Accessibility for ICT Products and Services — Requirements.
- ▶ **IS 17802 (Part 2):2022** — Accessibility for ICT Products and Services — Determination of Conformance.
- ▶ Relevant accessibility requirements and good practices contained in the **Guidelines for Indian Government Websites (GIGW)**, where applicable.
- ▶ Relevant requirements of the **Rights of Persons with Disabilities Act, 2016** and the **Rights of Persons with Disabilities Rules, 2017**, as applicable to information and communication technology.
- ▶ Applicable accessibility requirements for electronic documents, including accessible and tagged PDF practices.

Standard Harmonization: WCAG 2.2 Level AA is used as the primary international web-accessibility target, while IS 17802 provides the Indian ICT accessibility requirements and conformance framework.

Current Conformance Status: Not Assessed / Under Accessibility Evaluation

The website is being developed with the objective of conforming to WCAG 2.2 Level AA and the applicable requirements of IS 17802.

A final claim of full conformance will only be made after the applicable website pages, user journeys, interactive functionality, documents, multimedia, and other in-scope content have been evaluated against the applicable requirements.

Where accessibility barriers are identified, corrective actions and accessible alternatives will be provided where reasonably practicable.

§ 6 ACCESSIBILITY FEATURES

The website is intended to provide the following accessibility features:

- ▶ **Semantic HTML Structure:** Meaningful page headings and a logical heading hierarchy.
- ▶ **Descriptive Page Titles:** Clear, informative titles on all pages.
- ▶ **Consistent Navigation:** Uniform navigation structures across all pages.
- ▶ **Keyboard-Accessible Interaction:** All interactive components operable without a mouse.
- ▶ **Visible Focus Indicators:** High-visibility focus indicators for keyboard navigation.
- ▶ **Bypass Blocks:** A skip mechanism to bypass repeated navigation and header content.
- ▶ **Descriptive Links & Labels:** Meaningful link text and accessible button labels.
- ▶ **Accessible Forms:** Explicitly associated labels, instructions, error identification, and correction cues.
- ▶ **Text Alternatives:** Descriptive alt-text for meaningful non-text content; decorative graphics marked as artifacts.
- ▶ **Multimedia Accessibility:** Captions and textual alternatives for recorded and live multimedia; audio descriptions where necessary.
- ▶ **Responsive Presentation:** Full reflow and zoom support across desktop, tablet, and mobile displays without loss of content.
- ▶ **Contrast & Visual Design:** Sufficient colour contrast; information never conveyed through colour alone.
- ▶ **Device Independence:** Interfaces that do not require specific pointer gestures or physical movements.
- ▶ **Assistive Technology Interoperability:** Accessible status messages, notifications, and programmatic roles/states.
- ▶ **Accessible Downloadable Documents:** Structured, tagged PDF documents and downloadable materials.

The website is designed so that users can navigate and operate its essential functionality without requiring a mouse. Navigation mechanisms are intended to remain consistent throughout the website.

The website provides:

- ▶ A consistent header and primary navigation.
- ▶ Clear page titles.
- ▶ Meaningful headings and labels.
- ▶ Logical focus order.
- ▶ Visible keyboard focus.
- ▶ Keyboard-accessible menus, dialogs, controls, and forms.
- ▶ A skip mechanism for bypassing repeated navigation.
- ▶ Descriptive link text.
- ▶ Consistent identification of controls serving the same purpose.
- ▶ More than one method for locating important content where appropriate, such as navigation, search, sitemap, index, or directly accessible page links.
- ▶ Focus management for dialogs, menus, and other dynamic components.
- ▶ Protection against focus being hidden behind sticky headers, banners, dialogs, cookie notices, or other author-created content.

Keyboard Operation: Users should be able to navigate through the website using standard keyboard commands such as Tab, Shift+Tab, Enter, Space, and arrow keys where appropriate.

§ 8 VISUAL ACCESSIBILITY

The visual design is intended to support users with low vision and other visual disabilities.

- ▶ The website is designed to provide sufficient text and interface contrast and to avoid communicating information through colour alone.
- ▶ Text should remain usable when enlarged and the layout should remain functional at increased text size and browser zoom.
- ▶ The interface should support responsive reflow so that users do not need unnecessary horizontal scrolling for ordinary page content.
- ▶ Focus indicators should remain clearly visible for keyboard users.
- ▶ Users should not be required to distinguish important information solely through colour, shape, position, size, or visual appearance.

§ 9 CONTENT STRUCTURE AND READABILITY

- ▶ Content is structured using semantic headings, paragraphs, lists, tables, landmarks, labels, and other appropriate semantic elements.
- ▶ The primary language of each page is programmatically identified.
- ▶ Where multiple languages are used within the same page, language changes are identified where technically appropriate.
- ▶ Content is written using clear, descriptive language and meaningful headings.
- ▶ Instructions do not depend solely on visual or auditory characteristics.

- ▶ Meaningful images are provided with appropriate text alternatives that communicate their purpose or equivalent information.
- ▶ Decorative images are treated as decorative so that assistive technologies do not announce unnecessary information.
- ▶ Images containing essential information are not used as the only means of conveying that information.
- ▶ Complex graphics, diagrams, charts, maps, or visualizations are accompanied by suitable textual information where the visual content conveys information necessary to understand the page.

§ 11 AUDIO, VIDEO AND MULTIMEDIA

Pre-recorded multimedia is provided with appropriate accessibility support. Where applicable:

- ▶ Captions are provided for prerecorded synchronized media.
- ▶ Live captions are provided for live audiovisual event content where required or applicable.
- ▶ Transcripts or equivalent textual alternatives are provided where appropriate.
- ▶ Audio descriptions or equivalent alternatives are provided where essential visual information is not otherwise available.
- ▶ Multimedia controls are keyboard accessible.
- ▶ Automatically playing audio is avoided.
- ▶ Moving, blinking, scrolling, or auto-updating content has appropriate user controls where applicable.
- ▶ Media does not contain flashing content that could create seizure or physical-reaction risks.
- ▶ Where event recordings contain important visual information, equivalent accessible information will be provided.
- ▶ Where third-party media services are used, the accessibility of the third-party service will be considered when selecting or integrating the service.

§ 12 FORMS, REGISTRATION AND INPUT ASSISTANCE

Registration and other forms are designed to be accessible to users with disabilities. Form controls should have:

- ▶ Programmatically associated labels.
- ▶ Clear instructions and clearly identified required fields.
- ▶ Appropriate input purposes where applicable.
- ▶ Accessible error messages and identification of the field containing an error.
- ▶ Suggestions for correcting known input errors.
- ▶ Accessible success and status messages.
- ▶ Logical keyboard navigation, appropriate autocomplete, and input attributes.
- ▶ Protection against unnecessary duplicate entry within the same process.
- ▶ **Accessible Authentication:** Where authentication is required, the authentication process should avoid unnecessary cognitive-function tests and should provide an accessible authentication method.
- ▶ **Confirmation & Review:** Where legal commitments, financial transactions, or consequential submissions occur, users should have an appropriate opportunity to review, correct, or confirm submitted information before final submission.

The website is designed for use across desktop, laptop, tablet, and mobile devices. The website should remain operable when users change:

- Screen size and viewport dimensions.
- Browser zoom and text size.
- Orientation, unless a specific orientation is genuinely essential.
- Input method (mouse, touch, keyboard, switch control).
- Touch targets should be sufficiently sized or sufficiently separated to prevent accidental activation.
- Functionality that requires dragging should have an equivalent non-dragging method where applicable.
- Functionality relying on device motion should have an alternative user-interface method where applicable.

§ 14 ASSISTIVE TECHNOLOGY COMPATIBILITY

The website is intended to work with commonly used assistive technologies and accessibility-supported web technologies. Accessibility testing should include combinations such as:

- **Windows:** NVDA with a supported browser.
- **Windows:** JAWS with a supported browser where available for testing.
- **macOS / iOS:** VoiceOver with Safari.
- **Android:** TalkBack with a supported browser.
- **Keyboard-only:** Full navigation without mouse or touch input.
- **Display Customization:** Browser zoom, text enlargement, high-contrast, or user-defined display settings where supported.

Actual supported environments should be confirmed through accessibility testing before publishing a formal compatibility claim.

§ 15 DOCUMENTS AND PDFS

Documents published through the website should be provided in accessible formats. Where PDF documents are provided, they should be created as accessible tagged PDFs and should include, where applicable:

- Correct logical reading order and proper heading structure.
- Document language, document title, and metadata.
- Correct table structure and text alternatives for meaningful images.
- Accessible links and link text; correct tab order for interactive elements.
- Accessible form-field labels where forms are used; bookmarks for longer documents.
- OCR for scanned documents where text recognition is required.
- Decorative content correctly identified as artifacts.
- Scanned image-only documents should not be used as the sole accessible version of essential information.

Alternative Formats: Where an inaccessible document cannot immediately be remediated, an accessible HTML version or another equivalent accessible alternative should be provided.

§ 16 MOTION AND ANIMATION

- The website avoids unnecessary motion, flashing, blinking, or automatically moving content.
- Where moving, scrolling, blinking, or auto-updating information is necessary, appropriate mechanisms are provided to pause, stop, hide, or control the content where applicable.
- Animations should respect user preferences such as reduced-motion settings where technically applicable.
- Decorative animation should not interfere with reading, navigation, keyboard focus, or essential interaction.

The website may link to or integrate with third-party services, including registration platforms, communication services, social-media services, software repositories, analytics services, payment services, hosting services, content-delivery services, and other external resources.

Third-party services are not controlled entirely by SRM University-AP and may therefore have accessibility characteristics outside our direct control.

Where a third-party service is essential to completing an important event-related task, reasonable efforts should be made to identify an accessible equivalent or provide an alternative method of completing the task.

§ 18 PHYSICAL EVENT ACCESSIBILITY

Accessibility of the physical Qiskit Fall Fest 2026 event should be addressed in addition to digital accessibility. Before publication, the organizers should verify the availability and accessibility of:

- ▶ Step-free entrance routes.
- ▶ Ramps and/or accessible lifts where required.
- ▶ Accessible toilets and accessible seating.
- ▶ Accessible registration and help desks.
- ▶ Accessible parking or drop-off arrangements where available.
- ▶ Clear routes between major event areas.
- ▶ Accessible emergency evacuation procedures.
- ▶ Appropriate assistance for participants with mobility disabilities.
- ▶ Captioning or hearing-access support for presentations where applicable.
- ▶ Sign-language interpretation where arranged or required.
- ▶ Accessible presentation materials.
- ▶ Reasonable accommodation procedures.
- ▶ Assistance arrangements for service animals.

Verification Rule: Only facilities that have been physically verified should be described as available.

§ 19 KNOWN ACCESSIBILITY LIMITATIONS

Accessibility is an ongoing process. At the time of publication, the following categories should be monitored for accessibility limitations:

- ▶ Third-party embedded services.
- ▶ External registration platforms.
- ▶ External video or social-media content.
- ▶ Older or archived documents.
- ▶ User-generated content.
- ▶ Newly uploaded event material.
- ▶ Newly introduced interactive components.

Known limitations should be documented in plain language together with an accessible alternative or method for requesting assistance whenever possible.

Current Status: No known limitations identified in the latest completed accessibility assessment.

When essential information or functionality is not directly accessible, users may request an accessible alternative. Examples may include:

- ▶ Accessible HTML content.
- ▶ Accessible PDF or EPUB documents.
- ▶ Plain-text information.
- ▶ Transcripts and captioned media.
- ▶ Alternative registration assistance.
- ▶ Direct assistance from the event organizers.

Requests should identify the relevant page, document, event material, or functionality whenever possible.

§ 21 FEEDBACK AND ACCESSIBILITY SUPPORT

We welcome feedback regarding the accessibility of the Qiskit Fall Fest 2026 website and event-related digital content.

REPORT BARRIERS	qiskitfallfest@srmap.edu.in
RESPONSE SLA	Acknowledgment within 24 hours · Endeavour to resolve within 15 days

When reporting an accessibility issue, users may provide:

- ▶ The page or document where the problem occurred;
- ▶ A description of the accessibility barrier;
- ▶ The task they were attempting to complete;
- ▶ Browser and device information, where available;
- ▶ Assistive technology information, where applicable; and
- ▶ The accessible format or alternative that would be most useful.

We aim to acknowledge accessibility feedback within 24 hours and endeavour to resolve them within 15 days, and will make reasonable efforts to provide an accessible alternative or corrective response.

§ 22 ACCESSIBILITY ASSESSMENT

The website should be evaluated using a combination of automated testing and human review. The assessment should include:

- ▶ WCAG 2.2 Level AA success criteria.
- ▶ Applicable IS 17802 Part 1 requirements and IS 17802 Part 2 conformance methodology.
- ▶ Keyboard-only testing, screen-reader testing, and mobile accessibility testing.
- ▶ Zoom, reflow, and colour-contrast testing.
- ▶ Form and error-handling testing; dynamic-content and status-message testing.
- ▶ Multimedia testing and document accessibility testing.
- ▶ Third-party integration testing and representative user journeys.
- ▶ Where practicable, usability testing should include people with disabilities.

ASSESSMENT APPROACH	Self-evaluation
ASSESSMENT DATE	13/9/26
EVALUATION REPORT	Pending evaluation

The website uses or may rely on the following technologies:

- ▶ **HTML:** Semantic structure and element roles.
- ▶ **CSS:** Presentation, responsive layouts, and visual hierarchy.
- ▶ **JavaScript:** Interactive components and event handling.
- ▶ **WAI-ARIA:** Accessible Rich Internet Applications attributes where necessary.
- ▶ **SVG and Web Graphics:** Scalable vector graphics with text alternatives.
- ▶ **Responsive Web Technologies:** Flexible grids and fluid media.
- ▶ **Browser-Native Accessibility:** Built-in platform accessibility APIs and features.

Technologies should be implemented using accessibility-supported methods and should expose appropriate names, roles, states, properties, values, and status changes to assistive technologies.

§ 24 ACCESSIBILITY MAINTENANCE

Accessibility will be considered whenever significant website changes are introduced. Accessibility checks should be incorporated into:

- ▶ New page and component development.
- ▶ Content publication and new forms.
- ▶ Multimedia publication and new third-party integrations.
- ▶ Website redesigns and registration changes.
- ▶ Major software updates.

Previously resolved accessibility issues should be regression-tested after significant changes.

§ 25 APPLICABLE INDIAN AND INTERNATIONAL FRAMEWORKS

This Accessibility Statement is informed by:

- ▶ **Rights of Persons with Disabilities Act, 2016.**
- ▶ **Rights of Persons with Disabilities Rules, 2017**, including applicable accessibility requirements for ICT.
- ▶ **IS 17802 (Part 1):2021** — Accessibility for ICT Products and Services — Requirements.
- ▶ **IS 17802 (Part 2):2022** — Accessibility for ICT Products and Services — Determination of Conformance.
- ▶ **Guidelines for Indian Government Websites (GIGW)**, where applicable.
- ▶ **W3C Web Content Accessibility Guidelines (WCAG) 2.2 Level AA.**
- ▶ Applicable international ICT accessibility guidance, including **EN 301 549** where relevant.
- ▶ Applicable accessibility requirements for electronic documents.

This Accessibility Statement should be formally reviewed and approved by an authorized representative of SRM University-AP / the Qiskit Fall Fest 2026 organizing authority.
